

## Site Master Ultraportable Cable and Antenna Analyzer S331P

### Features

## Key Features and Benefits

### Optimized for field use

- Smallest, lightest, and fastest Site Master™
- Direct connection to DUTs eliminating the need for phase stable cables
- Powered through USB interface (No battery required)
- Rugged and reliable
- Impact, dust and splash resistant
- Factory default 1-Port ReadyCal (automatically applied to all measurements except Transmission)
- Compatible with Anritsu Software tools including easyTest™ Tools

### Easy to use

- Same user interface as the S331L
- Integrated Help function
- Site Master Classic Mode
  - The Site Master S331P offers a convenient Classic Mode that is easy to use. Current customers with other Site Master models will find Classic Mode familiar and easy to use.

The Site Master S331P also offers a mode with more capability called Advanced Mode. Advanced Mode has a much more modern look and feel to it, and many users will immediately appreciate the new Advanced Mode GUI's button layout and functionality. With Advanced Mode, users also get some extra capabilities such as 8 markers instead of 6 and 6 customizable touch screen icons for quick recalling of regularly used setups, making operation easier and more efficient.

### **Efficient sweep management**

- Store multiple file formats
  - Sweeps, setups, screenshots
- Fast preview of stored sweeps
- Line Sweep Tools (LST) Software
  - Edit sweeps, rename, archive
  - Generate PDF or HTML reports
- Standard \*.dat sweep file format
- Compatible with HHST
  - Widely accepted by operators
